Insert a pre-roll or VOD playlist before an HLS stream produced by Wowza Streaming Engine

Originally Published on 10/03/2010 | Updated on 04/28/2019 11:37 am PDT

Below are two client-side, browser-based example solutions for inserting a VOD pre-roll ad or a VOD playlist before an HLS stream produced with Wowza Streaming Engine™ media server software. This example code works for VOD-to-live or VOD-to-VOD. It doesn’t work for live-to-VOD. Switching from one video or stream to another with different audio encoding doesn’t work. The transitions aren’t seamless; loading takes a few moments.

Insert a VOD pre-roll for live stream
