Use the Wowza Streaming Engine™ media server software REST API to identify and manage users of a Wowza Streaming Engine instance.

**Notes:**
- Wowza Streaming Engine 4.3.0 or later is required.
- PHP examples for the tasks in this article are available in the `tests` folder of the [PHP REST Library for Wowza Streaming Engine on GitHub](https://github.com/wowza/php-rest-library-for-wse).
- Reference documentation for the Wowza Streaming Engine REST API is available by using OpenAPI (Swagger), which you can download and install locally. See [Access reference documentation for the Wowza Streaming Engine REST API](https).

**Contents**

- Get a list of server users
- Create a server user
- Remove a server user

**Get a list of server users**

View a list of users for a Wowza Streaming Engine instance:

The command should return a response that lists each user and the groups to which each is assigned, like this:
Create a server user

Create a user (WowzaNewbie, in this example) who isn't assigned to any groups:

Remove a server user

Delete a user:
